EXP 6-Workflow Automation using Deluge — Gym Membership Enrollment Form

1.AIM

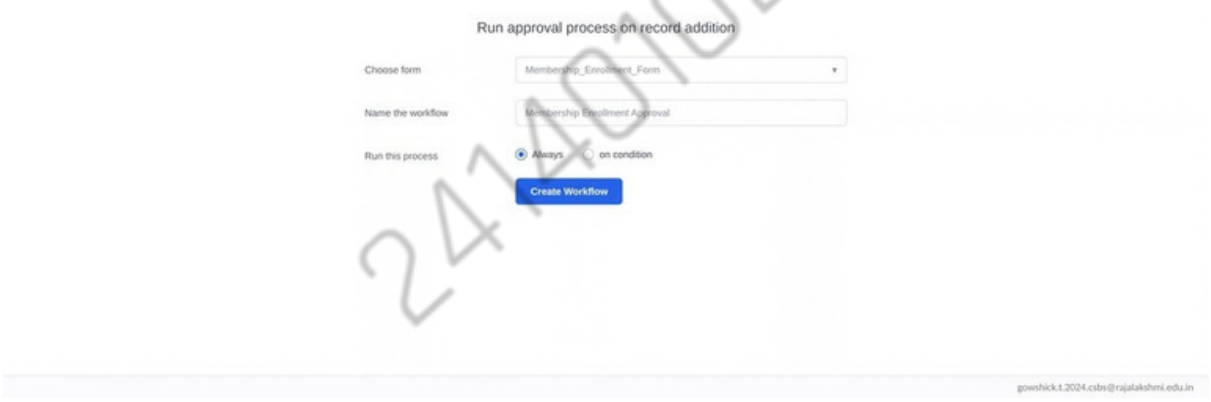

Toautomate the approval and notification process of the "Membership Enrollment Form" application in Zoho Creator using Deluge scripting, so that every enrollment request submitted by a prospective member is automatically routed for review, and the concerned member is notified by email the moment the request is approved or rejected — without any manual intervention from the front desk.

2. Procedure

2.1 Creating the Approval Workflow

1. Open the Workflow tab of the Gym Membership Enrollment application and go to the Approvals section. Choose the form "Membership_Enrollment_Form" on which the approval process must run.

2. On the "Run approval process on record addition" screen, select the form, name the workflow (for example "Membership Enrollment Approval"), and set the process to run Always so that every new enrollment record automatically enters the approval chain.

prospective member submits a new enrollment request, the record is automatically pushed into the approval pipeline for the front desk's review, with no separate condition needed to activate it.

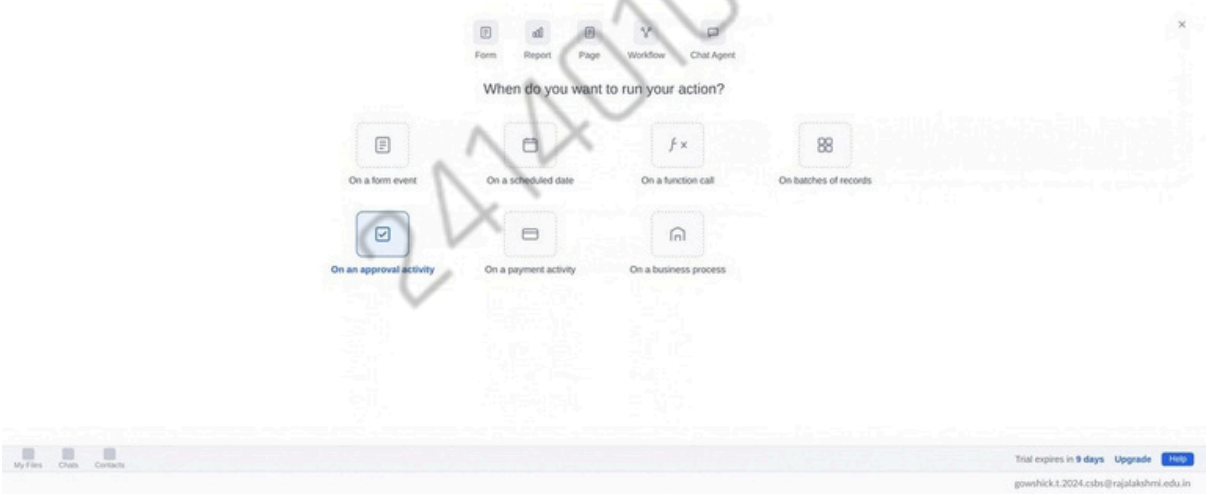

3. In parallel, a form-level workflow is created under "Run workflow on any event in the form" so that field validations and record-level actions (create/edit/delete) can also trigger Deluge scripts independently of the approval chain.

Explanation: This screen lets the workflow fire on a chosen Record Event (Created, Edited, Created or Edited, or Deleted) combined with a Form Event such as validation on submission. Naming it (e.g. "Notify Member") keeps the automation organised and identifiable on the Workflow dashboard.

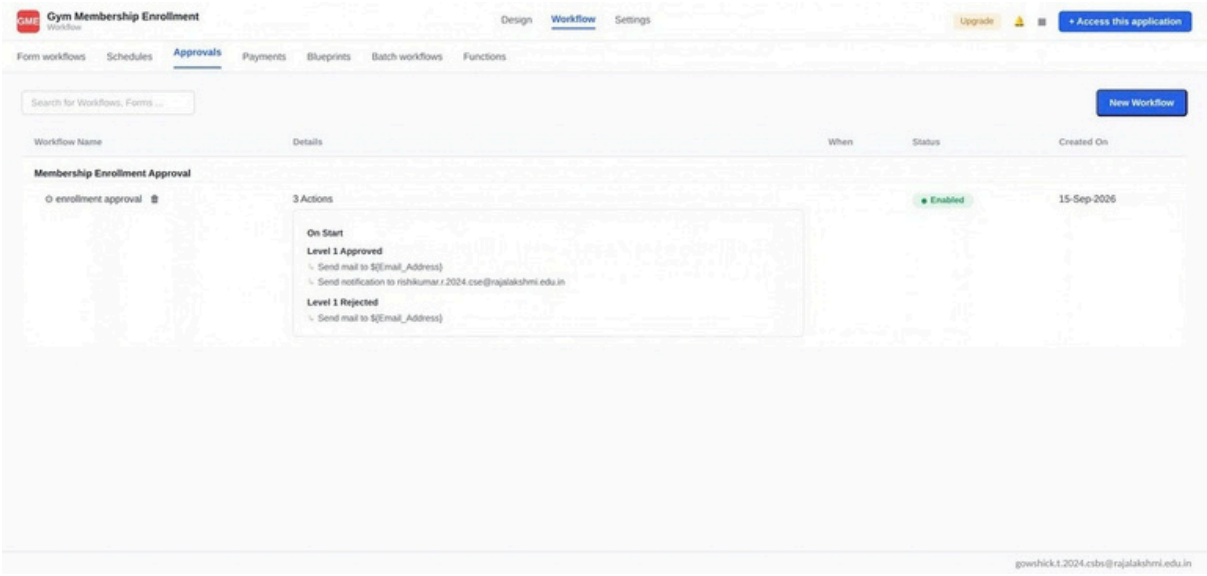

2.2 Choosing the Trigger and Writing the Deluge Script

4. When adding a new action, Zoho Creator asks "When do you want to run your action?". The options available are On a form event, On a scheduled date, On a function call, On batches of records, On an approval activity, On a payment activity, and On a business process. For this automation, On an approval activity is selected so the script executes right after a request is approved or rejected.

Explanation: Each trigger type maps to a different real-world moment. Choosing "On an approval activity" ties the Deluge script directly to the outcome of the approval step (Level 1 Approved / Level 1 Rejected), instead of running on every save, which keeps notifications limited to genuine status changes.

5. In the Approvals tab, the "Membership Enrollment Approval" approval named "enrollment approval" branches into an On Start, a Level 1 Approved path, and a Level 1 Rejected path. Each approved/rejected path is attached to Deluge scripts that send a mail to ${Email_Address} and push an in-app notification to the reviewer, e.g. rishikumar.r.2024.cse@rajalakshmi.edu.in.

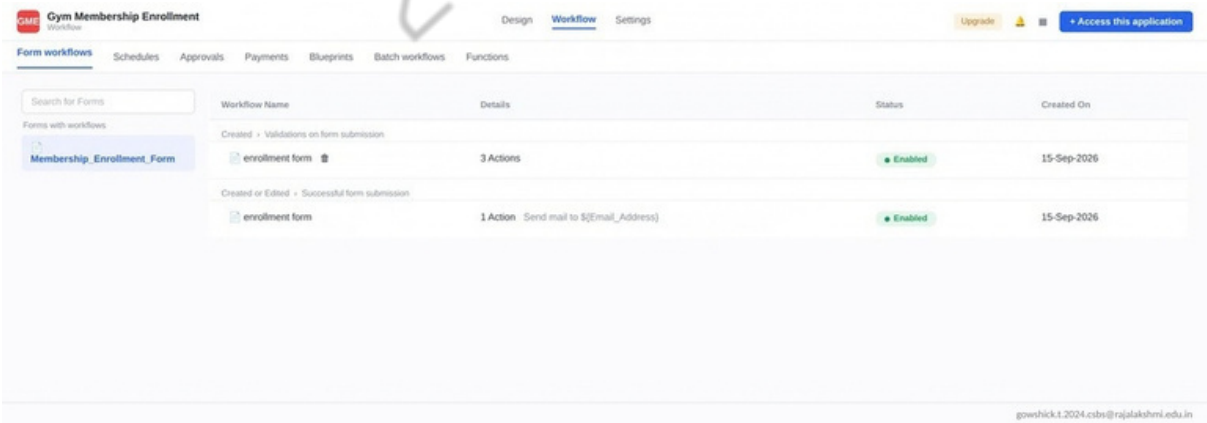

Explanation: This is the core of the automation. The Deluge scripts under "Level 1 Approved" send an email to the prospective member and an internal notification confirming the enrollment has been accepted, while the script under "Level 1 Rejected" sends a rejection mail instead — so the correct notification fires automatically depending on the reviewer's decision, with 3 actions enabled overall for this approval.

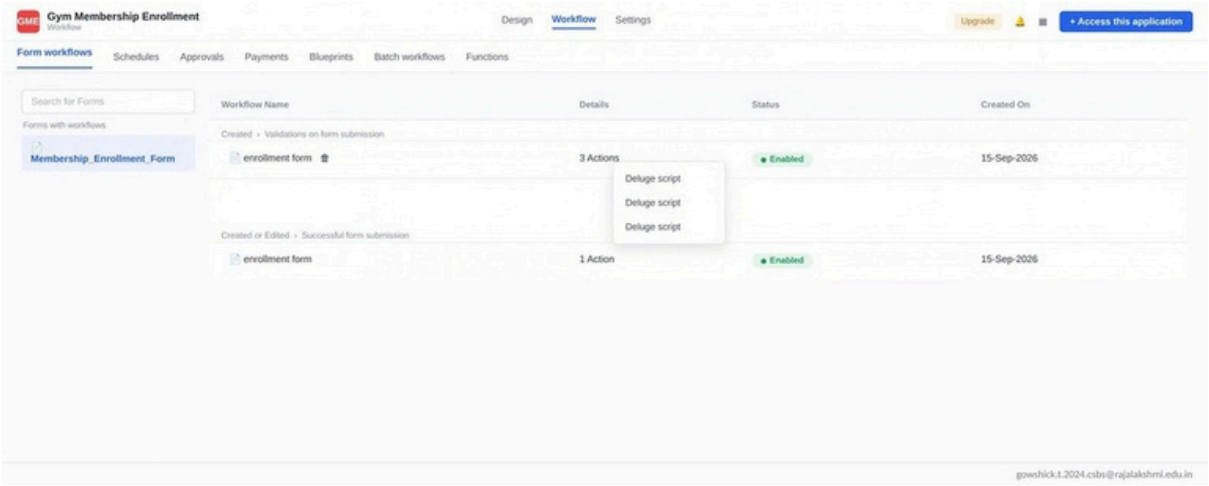

3. Output

Once the approval workflow and its Deluge scripts were published, every enrollment request submitted through the Membership Enrollment Form began flowing through the automated approval chain, with the front desk able to track pending and completed reviews from dedicated tabs.

Form Workflows

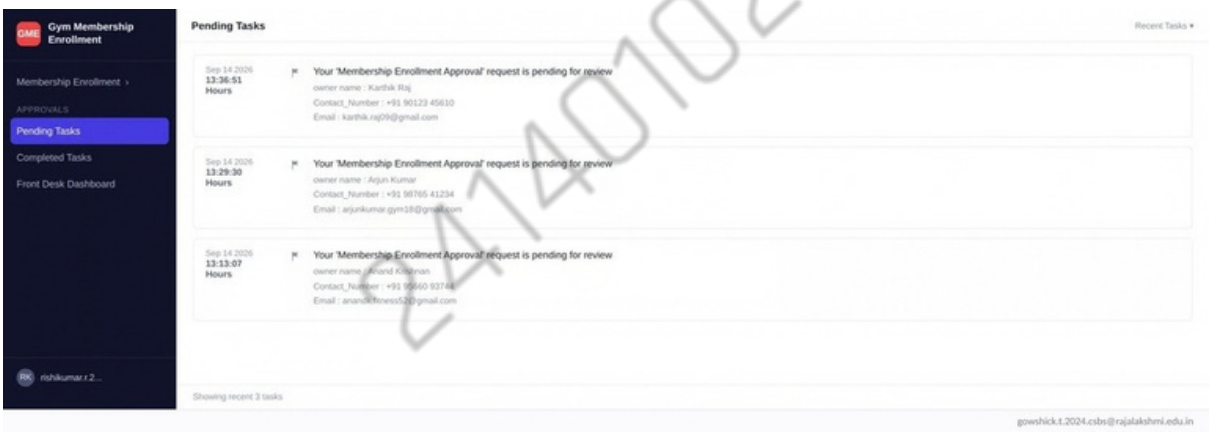

Explanation: The Form workflows list under the Workflow tab shows two automations running on the "Membership_Enrollment_Form": one with 3 actions triggered on "Created > Validations on form submission", and another with 1 action triggered on "Created or Edited > Successful form submission" that sends a confirmation mail to the address captured in the ${Email_Address} field. Both are marked Enabled, confirming the automations are live on the form.

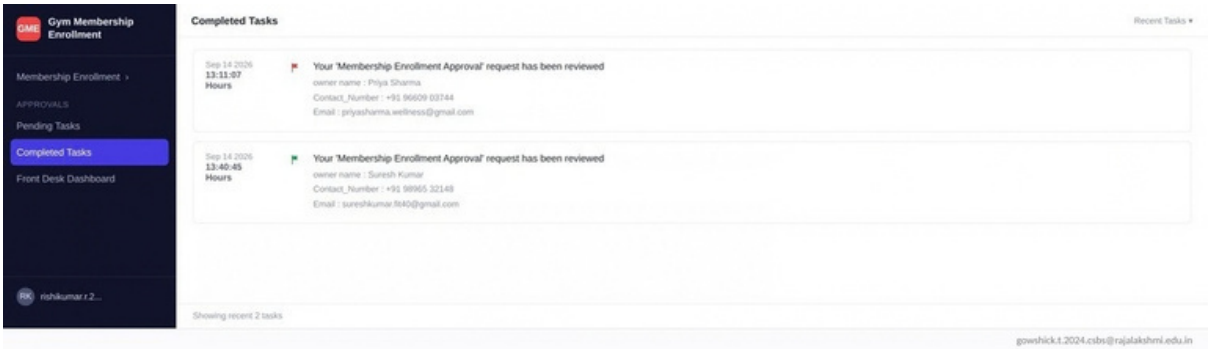

Explanation: Opening the "3 Actions" link on that workflow shows the individual Deluge scripts attached to it. All three actions are Deluge scripts, kept as separate, independently editable steps — for instance validating the Age range, sending an acknowledgement mail, and assigning a default trainer based on Preferred_Activities — which together make up the complete automation output for that form event.

Pending Tasks

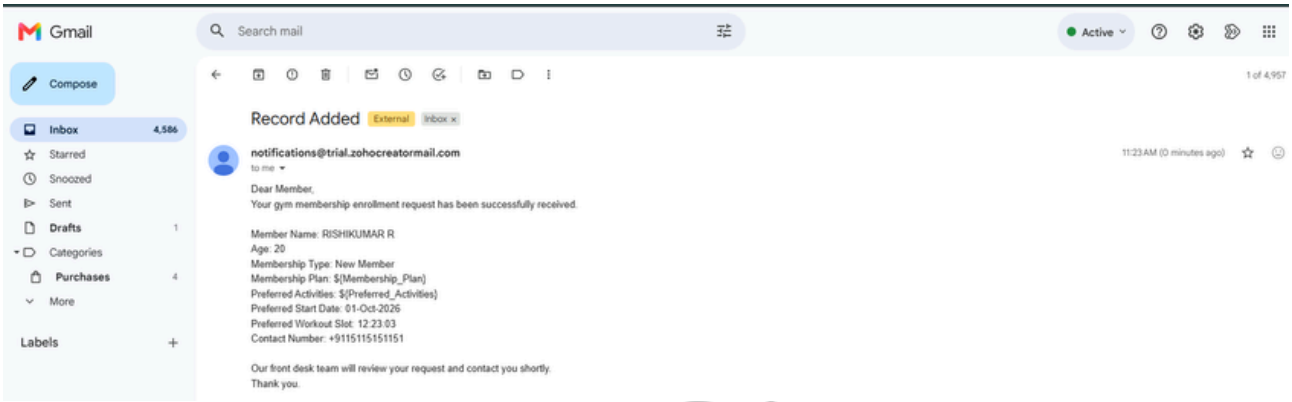

Explanation: The "Pending Tasks" screen under Approvals lists every enrollment request that is still awaiting a Level 1 review — here requests from members Karthik Raj, Arjun Kumar, and Anand Krishnan are shown, each with the member name, contact number, and email that the Deluge script will use once a decision is made, confirming that the "On Start" trigger correctly queued each new record for approval.

Completed Tasks

Explanation: The "Completed Tasks" screen shows the same requests after a reviewer has acted on them — Priya Sharma's request was reviewed (rejected, shown with a red marker) and Suresh Kumar's request was reviewed (approved, shown with a green marker). This confirms that the Level 1 Approved and Level 1 Rejected Deluge scripts executed correctly, moving each record out of Pending Tasks and triggering the corresponding mail/notification action automatically.

EMAIL OUTPUT:

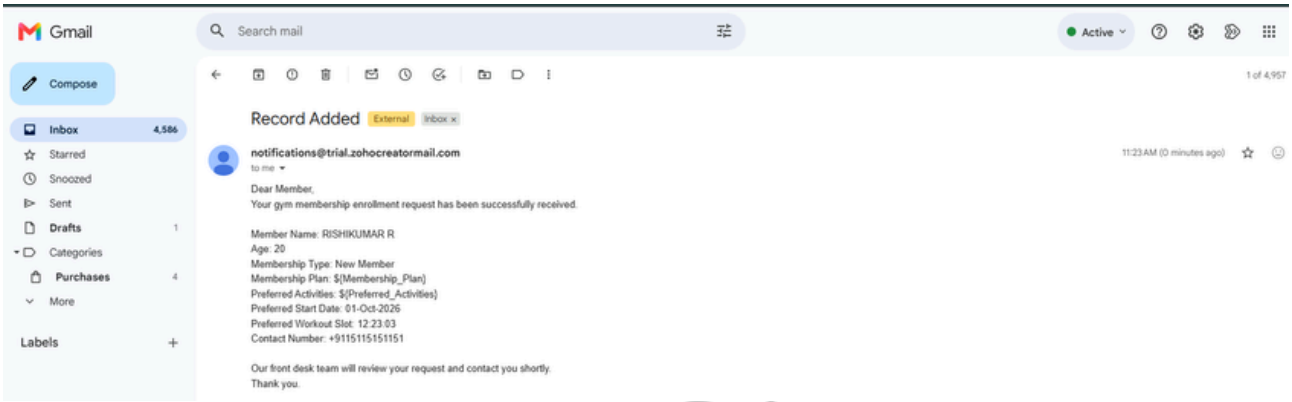

4.R**esult**

An approval-driven workflow automation was successfully built for the "Gym Membership Enrollment" application using Deluge scripting in Zoho Creator. Every new enrollment request is automatically queued for Level 1 review, and Deluge scripts attached to the Level 1 Approved and Level 1 Rejected branches automatically send an email and an in-app notification to the concerned member and reviewer. This eliminates manual follow-up, ensures every enrollment request is reviewed in a consistent, traceable manner, and keeps both the prospective member and the front desk informed in real time about the status of each membership enrollment.
